Product Details

This glove is what you wear when you don't want to wear a glove... but absolutely need to.

It features a palm and finger dip of black nitrile on a seamless nylon inner with elasticised wrist. It therefore offers all the protection of nitrile from water, chemicals and other compounds, while at the same time allowing the wearer to carry out fine mechanical tasks with their hands.

When you're wearing this glove, you know your hands will be safe from the chemicals or compounds that you're having to deal with. It is tight fitting like a disposable glove but comes off easily and is easily reused. The lightweight open nylon back allows the glove to breathe.

If it sounds like it'll do the job, then make sure you place an order today.
