- ISO 9001:2015
- ISO 13485:2016
- EN ISO 21420:2020
- FDA
- CE 2777

Product Details

These are the World's Toughest Disposable Gloves. They represent an incredible leap in disposable glove technology and Armour Safety is the place to get them in New Zealand.

Black Armour gloves are made from 100% Nitrile, a synthetic material that resists chemicals like petrol, oils, grease, diesel, hydraulic fluids, solvents, paint thinners, acids, disinfectants, strong cleaners and most alkalis. It has 3 times the puncture protection of latex and is often used by people with an allergy or intolerance to latex.

These gloves are powder free and incredibly strong. To see for yourself, you can do the 'tear test.' After you've ordered your gloves, try on a pair and then see if you can stretch them beyond your elbow without them tearing.

Black Armour gloves have textured fingertips providing precise handling. They have incredible "touch and feel" yet provide superior protection and have unsurpassed comfort for extended wear.

These gloves are perfect for mechanics, panelbeaters, painters - both auto and general, fuel dispensing, laboratory workers, morticians and 100s of other jobs where protection from chemicals is essential. The black colour is excellent for hiding other colours - i.e. hairdressing or tattooist applications. They come in boxes of 100 gloves and sizes from M to 2XL (if you need some really big disposable gloves try these).

Black Armour gloves are US FDA approved for use in food manufacturing. This certification is accepted by the NZ Food Safety Authority and MAF. They also have European CE certification.

There are very few disposable gloves sold in NZ with these credentials, so make sure you order today.

Features and Benefits

- Made from 100% Nitrile
- Perfect for chemical, petroleum handling
- Powder-free
- Incredibly strong
- Textured fingertips for precise handling
- Incredible "touch and feel" yet comfortable for extended wear
