Code: DMP2V

Features

- Unit: Box
- Pack Qty: 12
- Carton Qty: 10
- Filter Rating: P2
- AS/NZS 1716:2012

Product Details

Our Armour Disposable Respirator Valve Masks are easily one of our best-selling products, and for good reason – they offer everything you could want from a respirator valve mask at an affordable price.

These masks are known for their high filtration efficiency. There are some masks out there that are so ineffective that you might as well be wearing a bit of cloth around your face. Not with these masks, which conform to the AS/NZS 1716:2012 standards for respiratory protective devices. That makes them appropriate to use in most work environments where staff need protection against airborne hazards.

Protection is important, but almost as important is comfort. These masks have low breathing resistance and an exhalation valve, meaning you and your team can breathe easily while still being protected. They also have double elastic straps moulded to mask, so they are comfortable to wear for longer periods.

So if you're after some decent disposable respirator valve masks, these will do the job.

Features and Benefits

- Metal Free Disposable respirator with exhalation valve.
- Low breathing resistance and high filtration efficiency.
- Loaded polypropylene material without any irritating or stimulant material.
- Double elastic straps moulded to mask.
- Adjustable nosepiece and inner foam provide a custom seal for different facial sizes.
- Conforms to AS/NZS 1716:2012
